

TechSmith Relay allows you to record a presentation/video on your device which is then automatically uploaded to the Podcast Video Portal at <https://video.manchester.ac.uk>

For example, these tools will allow you to easily record a PowerPoint presentation with a voiceover in a non-podcasting teaching room.

Modern online video creation without the high learning curve

The diagram illustrates a three-step process for video creation. Step 1, "Record videos", is represented by an icon of a computer monitor and a smartphone. Step 2, "Share and manage content", is represented by a cloud icon with a play button. Step 3, "See the results", is represented by a bar chart icon.

- 1. Record videos**
Start with simple and intuitive video recording that works from any computer or mobile device with a few clicks.
- 2. Share and manage content**
Videos you create are then uploaded to an easy-to-navigate online video library that privately stores your content.
- 3. See the results**
After your video is uploaded, track learning in real-time with TechSmith Relay's analytics without the need for a third-party tool.

Download the Relay recorder for your device (Windows, Mac, Android and iOS versions available)

To install on a University Managed PC\Laptop

It is available for you to self-install from [Software Centre](#)

See Article [Installing Programs on the University Managed Image using Software Centre](#)

Once installed you can login using your University username and password to upload and save recordings.

How to use TechSmith Relay

1. Open the software from the desktop and log in.

2. Set up the desktop so the camera can record your screen. Use audio if you wish but be aware of background noise.

3. Stop recording when you are finished and discard or submit the file to the video portal.

4. Open email account and wait (10/30 mins) for a notification that the podcast is ready to view, download, edit or delete.

5. Follow the link to access the .mp4 and download the file.
